

CHAPTER 16-10 EROSION CONTROL PLAN

16-10-1

SPECIFICATIONS

Measures used to control erosion on a development site shall meet the requirements of the Engineering Design Standards. Stripping of vegetation, regrading and cut and fill operations should be kept to a minimum, as should the amount of land and the duration of exposure. Whenever feasible, development plans should be made in conformance with topography in order to create the least erosion potential. Similarly, as much as possible, natural vegetation shall be retained, protected and supplemented. The City Engineer shall require any further measures as necessary to prevent erosion on building sites and developments from depositing wastes or sediments on public streets or other property. Every effort shall be made to retain the natural vegetation on all ditches and drainage ways. Ditches and drainage ways will not be disturbed without the approval of the City Engineer.

SUBDIVISIONS AND INDIVIDUAL LOTS

A. General

1. Land disturbing activities of one acre or more shall comply with the Erosion and Sediment Control Guidelines of the City's Engineering Design Standards and all SD Department of Environment and Natural Resources.

2. Throughout build-out, a subdivision owner and developer is responsible for and shall implement and maintain best management practices (BMP) and conditions of the approved erosion and sediment control plan to control erosion and sediment problems on all property within the subdivision until the notice of termination is granted. It shall be the responsibility of the subdivision owner and developer to inform owners and contractors of lots within the development about the erosion control standards. The responsibility may be transferred to new owners of lots within the subdivision by completing the transfer of permit coverage form as stated in the general permit.
